TalaPhoto offers you a way to get inspiration and ideas for your next photo or video project. The app is developed for the Mac platform, and the main objective is to help you construct and edit rich media content. TalaPhoto gives you a good base to work with, thanks to the presence of a user interface that is simple to use and well-designed. First things first: you're given the chance to browse for photos from your hard drive, the Internet, or even from a DVD or other external media device. When a photo or a video is successfully added to the project, you have the chance to rearrange its position on the layout. In addition to positioning, you can also assign a text label or subtitle, add a rating, or create slideshows and layouts using an assortment of existing presets. The project is an animated one, and therefore the graphics appear to dance and wiggle. Thanks to the resulting colorful and animated effects, it's fairly easy to create an attractive project. Basic picture editing options When it comes to basic picture editing, you have a good amount of control over color, contrast, saturation, shadows, and highlights. Other than these, there are eight different editing modes you can choose from: Monochrome, Black & White, B&W, Grayscale, Contrast, Contrast & Saturation, Sepia, and Sepia. The mode you use can be changed by means of a slider that's located on the right side of the preview. Other picture editing options Additional picture editing options include crop and rotate, color burn and dodge, spot healing, and border and frame. A cool feature in the editing area is that you can draw shapes around text labels, and therefore make them appear in the photo with a consistent style. The most interesting part of TalaPhoto, however, is the layout area. Here, you can easily customize the overall appearance of the project, including its size, orientation, and color scheme. Layout settings include a photo/text ratio that you can adjust. There's also a set of features that let you configure captions and add text labels. When creating slideshows, TalaPhoto offers a variety of presets and a playlist creator. Output options The application comes with several output options. You can use the built-in print, print, web designer, and photo show, which makes it easy to create and create HTML galleries. You also have the option to print, web
