Zeta Telnet is a useful terminal-based program for performing standard network tasks, such as file transfer, telnet to devices, or dialing phone numbers. It can be used on the command line, as a Windows GUI telnet client, and in an X Server window. It's ideal for automating small to medium-sized network tasks. It has a rich text output which can be saved in any text format. When connecting to devices, all of the data is sent as escape codes rather than characters. This allows for many more types of data to be sent to devices, such as mpeg video, binary images, and many more. When using Zeta Telnet to connect to devices or servers, all of the data is sent as escape codes. This means that Zeta Telnet is compatible with all of the built-in features of the device or server that you are connecting to. Zeta Telnet is a very stable, well-documented, and easy-to-use terminal-based program that is ideal for both the novice and the expert user. It is a simple program that can be used without reading the documentation, and works with a very diverse set of devices and software. This is a small utility with a rich feature set. It is easy to use and provides a full log of information for the user. It is possible to connect and transfer files to a telnet device with Zeta Telnet. It supports the following features: Support for different "virtual telnet" protocols If a device supports a protocol other than telnet, Zeta Telnet will emulate that protocol so that it can be used as if it were telnet. This means that you can use the same telnet command line to connect to your cable modem, wireless modem, pppd connection, dialup modem, or dialup connection. This can save time if you are familiar with one of these protocols. Support for Microsoft Windows telnet servers Zeta Telnet can act as a telnet client for a Windows telnet server. This means that you don't need to run a separate telnet server. It also allows you to access the device even if the device is turned off. Support for wide-character character sets It is possible to use non-English character sets on the command line of a device. Zeta Telnet supports many character sets, such as GB2312 (simplified chinese), ISO 8859-1, ISO 8859-15, ISO
