### AutoCAD For PC (Latest)

Extending the built-in software components of AutoCAD, such as screen customization, commands, toolbars, menus and dialog boxes. This can be achieved with the customization plugins, such as AutoCAD Architectural, AutoCAD Electrical and AutoCAD Steel, which can be used with AutoCAD regardless of the architecture (32-bit or 64-bit) of the installed version. AutoCAD also includes some unique features, such as: The ability to modify the customization settings of the program to suit the user's preferences. The ability to link and load external libraries. This allows use of third-party libraries in AutoCAD. The ability to create custom help files for the program. The ability to define multiple language, country and time zones and display them at the start-up. Version history Version 1 to 1999 AutoCAD version 1 was released in January 1986 and was bundled with AutoCAD, the first CAD program to offer both line and polygon models. It did not use the x86 architecture, which was first introduced in 1987. In 1991, version 2 was released. It was largely compatible with version 1 and included some features not found in version 1. In the late 1990s, the AutoCAD package was split into Autodesk Architectural Design and Autodesk Electrical & Electronic Design, which were separated out into their own programs, as the following table shows. Version 2000 to 2016 AutoCAD version 10 was released in December 1999. It is available on the Microsoft Windows and Macintosh platforms and was based on the x86 architecture. It was the first version to be available in 32-bit mode only (the 64-bit version was released in 2005), and included a 3D environment and was the first Autodesk product to include the brand name AutoCAD. It also introduced the first version of the interface, a new tool palette (the ribbon), and multi-threading. The October 2006 release of AutoCAD 2009 added some new features such as the ability to break and extend line segments, multi-zoom on the Internet, drawing manipulation commands, and improved file format support. The new command panel also included a number of additional features, such as drawing templates, custom commands and shapes. In May 2009, AutoCAD 2010 was released. Its most significant new features include: a new command panel (the ribbon), intelligent handling of .dwg (draftsman) files, the a1d647c40b

Field of the Invention The present invention relates to an image forming apparatus such as a copying machine, a printer and the like, which forms an image on a sheet by applying a developer onto an image bearing member. 2. Related Background Art In conventional image forming apparatuses of this kind, a support member is generally provided at an upstream side of a toner supply roller, and an image bearing member is contacted with the support member, whereby the developer is supplied from the support member to the toner supply roller, and the toner supply roller is rotated in a direction to supply the developer to a developing roller. A technology has been proposed in which a web formed with a large number of notches and a width smaller than that of the support member is provided, and the developer is supplied to the toner supply roller in such a manner that the developer is introduced into the notches in the web, and as a result, the developer is supplied to the toner supply roller. In the image forming apparatus of this kind, the developer is supplied to the toner supply roller and it is supplied to the developing roller to form a toner image on a recording material. Then, after the recording material with the toner image formed thereon is ejected onto a sheet tray, the toner supply roller is rotated in a reverse direction and the developer is returned from the developing roller to the toner supply roller, and after that, in order to return the toner to the developing roller again, the toner supply roller is rotated in the reverse direction, whereby the image forming operation is repeated. In the conventional image forming apparatus, since a driving force applied to the developer supply roller for supplying the developer to the developing roller is transferred to the toner supply roller for returning the developer
