If using HTML/XML with the latest template files from W3Schools, supports multiple lines for multi-line code 34

What's New in the

Convert2HTML is a Notepad++ plugin for syntax highlighting source files in HTML format. How it works: When you open a plain text file and select Convert2HTML from the menu bar, Notepad++ will analyze the source code, and highlight the file into syntax-highlighted HTML. Furthermore, the plugin offers a table-conversion feature, which converts the text from the plain text to HTML table, and a source code formatter feature, which allows you to convert your source code into HTML. Usage: Select source code to format. Press CTRL+SPACE or select Text > Convert to HTML. Select HTML and press CTRL+SPACE or select Text > Convert to HTML > Tables. Limitations: Convert2HTML converts only the selected source code. This will not convert an entire document. If you would like to convert a selected document, you will need to open the Document Properties dialog box and enter the text there. This feature is currently disabled in the latest release of the plugin, which is available from the Plugin Downloads Plugin.zip file. You can find out more about the conversion feature on the source code website.

Changelog: Version 0.3 (22-04-2011) - Added table conversion feature - Added font size to table header cells - Added shortcut "Properties" to the menu - Added documentation to help file - Minor fixes in conversion settings - Reverted to old method of opening HTML file - Switch between properties and HTML view Version 0.2 (30-03-2011) - Added shortcut "Show Properties" to the menu - Fixed some minor bugs Version 0.1 (17-03-2011) - Initial release Version 0.0 (11-02-2011) - Initial release You are using Internet Explorer 8 and have JavaScript disabled.
