Q: Same Mesh, Different Animations I have this problem that I tried to solve, but I'm stuck at a certain point. Consider I have a 2 cylinders in Blender. The first is a 'base' cylinder. The second is a 'top'. So, I have: The base cylinder has a rotation value of 0 The top cylinder has a rotation value of 90 degrees The next image shows the top cylinder as an animation, and the bottom as a keyframe animation (which I don't want to maintain). So, from this animation, a user can rotate the top cylinder and see how the base cylinder changes. The next image shows the animation to a keyframe: So, it is this animation that I want to keep. The question is: How can I join those two animations? Thank you. A: It depends on if the animations follow an interpolation method. If one animation is a simple interpolation, I like this method to connect the two animations. This method works by basically taking the points of the keyframe and the previous frames and calculating the new points. This gets a little complicated, but I like the results. If you want to use other interpolation methods and the animator needs to be notified that something has changed, the best way would be to enter edit mode and select the bones or keyframes and then choose "join". This will put a joint on the selected bone in the following frame. Here is a gif with bones selected: Here is the effect you are looking for: Looking for The Best Five-Factor Model for your Online Business - by August 11, 2017, 05:15 AM EDT - Subject: Looking for The Best Five-Factor Model for your Online Business The 5-Factor Model is the top-of-the-line in using variables to predict customer satisfaction. By Daniel P. Katz Customer-satisfaction. It's something to strive for, and when online businesses get it right, customers hang on their every word. When they mess up, it can cost them a lot of money—and customers can cancel their business accounts and go elsewhere. The 5-Factor Model is a widely accepted set of variables to predict customer satisfaction. It's a bunch of variables, created by John P. Kotter's kPERT Group, that

. At the same time, it's almost impossible to get a more creative card and the ability to channel its power to boost your own strength or speed. Either way, it's a card that has a crazy amount of power for so little mana, which is hard to come by in standard competitive Magic. \$ 0.00 \$ 0.00 \$ 0.00 \$ 0.00 \$ 0.00 \$ 0.00 \$ 0.00 \$ 0.00 Command the Ethereal In a world where we see players print out copies of cards in plain view for the world to see, Command the Ethereal is a beautiful and elegant way to play Magic. Of course, it's also the reason why you probably have this card in your collection. While you do put it on the battlefield, you mostly leave the rest to the ethereal. You aren't really setting anything up or really playing around anything at all. You're still getting ahead in life, but you aren't setting up your opponent for any specific play. In general, ethereal creatures are very easy to deal with. Since you're usually doing all of the work, it's unlikely that your opponent can really keep up. Therefore, even at its priciest, Command the Ethereal is normally a good card to play in conjunction with your ethereal creatures. Your opponent shouldn't even realize that you're doing anything, since they just won't have any idea of what they're dealing with. At its best, the ethereal is incredibly efficient and essentially auto-fills a spot on the board, a role we haven't really seen in the Modern era. Command the Ethereal: It's time to dig through your Standard collections for some cards. You'll be happy that you did, since this card is not going to be printed again. The ethereal is such a good fit in Commander because it's another card that plays well with any ethereal creature and doesn't even require the additional format-specific Commanding Ethereal's ability. As such, it's a great pick for a fresh Standard deck. Command the Ethereal is not quite as useful in Constructed, but it can still be a great tool for a bit of cheating. Why shouldn't we be able to cheat at one type of game, right? We could technically cheat at our other type of games with it too, but you don't have as much room for cheating. If you're cheating on your opponent by setting up some
